LandTech

Customer story

How Castle Green Homes reviews dozens of sites at once

A regional housebuilder using LandInsight to find and check land at scale.

3,461
sites saved in LandInsight

13,664
planning applications viewed

1,979
comparables reports generated

The challenge

Castle Green needed technology that let a growing land team work quickly and at scale.

It also needed richer local data, in an area where land data is harder to come by than most.

> **LandTech helps us manage our time better.**

How they use it

Planning and policy

Their most valuable feature. It shows present and emerging constraints before the team commits time to a site.

Everything in one place

Ownership, valuation and planning application data sit together, so due diligence takes fewer separate searches.

Dozens of sites at once

The team reviews many sites side by side, with regular Customer Success sessions on new features.

New in LandInsight this year

Projects takes a site from first look to appraisal and funding in one pipeline. AI summaries pull a site's planning history into one view, alongside flood risk layers and planning documents.

See it on your own patch

20 minutes with our team, on a site you're working now.
